

## VendorBridge

### Procurement & Vendor Management ERP

---

#### Overall Vision

The vision for VendorBridge is to simplify and digitize procurement operations for organizations through a centralized ERP platform that manages vendors, RFQs, quotations, approvals, purchase orders, and invoice generation.

The platform aims to reduce manual procurement inefficiencies by enabling structured workflows, centralized vendor communication, and real-time procurement tracking.

VendorBridge focuses on delivering core ERP functionalities with clean architecture, role-based workflows, and scalable module design.

#### Problem Statement

Design and develop a Procurement & Vendor Management ERP where organizations can:

- Register and manage vendors
- Create RFQs
- Receive vendor quotations
- Compare quotations
- Process procurement approvals
- Generate purchase orders
- Generate invoices
- Print invoices
- Send invoices through email
- Track procurement activities

The application must demonstrate proper ERP architecture, reusable modules, secure workflows, and intuitive UI/UX while handling procurement relationships between vendors, quotations, approvals, purchase orders, and invoices.

# Features

## 1. Login / Signup Screen

### Purpose

Authenticate users and provide role-based procurement access.

### Key Functionalities

- Email & password login
- Signup functionality
- Forgot password
- Session handling
- Validation
- Role-based authentication

## 2. Dashboard / Home Screen

### Purpose

Allow users to quickly monitor procurement activities.

### Key Functionalities

- Pending approvals
- Active RFQs
- Recent purchase orders
- Recent invoices
- Analytics cards
- Quick action buttons

## 3. Vendor Management Screen

### Purpose

Maintain organized vendor records.

### Key Functionalities

- Vendor registration & Vendor status tracking
- Vendor categories
- GST details
- Contact details
- Search & filtering

## 4. RFQ Creation Screen

### Purpose

Initiate procurement workflows efficiently.

### Key Functionalities

- RFQ title
- Product/service details
- Quantity management
- Attachments
- Deadline selection
- Vendor assignment

## 5. Vendor Quotation Submission Screen

### Purpose

Allow vendors to respond to procurement requests.

### Key Functionalities

- Pricing details
- Delivery timelines
- Notes/comments
- Editable quotations
- Quotation submission

## 6. Quotation Comparison Screen

### Purpose

Help procurement teams select the most suitable vendor.

### Key Functionalities

- Side-by-side quotation comparison
- Lowest price highlighting
- Delivery timeline comparison

- Vendor rating indicators
- Sorting & filtering

## 7. Approval Workflow Screen

### Purpose

Ensure structured procurement approvals.

### Key Functionalities

- Approve/reject actions
- Approval remarks
- Approval timeline
- Status tracking
- Workflow state transitions

## 8. Purchase Order & Invoice Generation Screen

### Purpose

Convert approved quotations into official procurement documents.

### Key Functionalities

- Auto-generated PO number
- Invoice generation
- Tax calculations
- Total calculations
- Download invoice as PDF
- Print invoice
- Send invoice via email
- Status updates

## 9. Activity Logs & Notifications Screen

### Purpose

Keep users informed about procurement updates.

### Key Functionalities

- RFQ notifications
- Approval alerts

- Invoice updates
- Activity timeline
- Audit logs

## 10. Reports & Analytics Screen

### Purpose

Provide procurement insights and trends.

### Key Functionalities

- Vendor performance analytics & Exportable reports
- Procurement statistics
- Spending summaries
- Monthly procurement trends

## User Roles

### Procurement Officer

- Create RFQs
- Compare quotations
- Generate purchase orders
- Generate invoices

### Vendor

- Submit quotations
- Track RFQ status
- View purchase orders

### Manager / Approver

- Approve or reject procurement requests
- Monitor procurement workflows

### Admin

- Manage users
- Manage vendors
- View procurement analytics

## Basic Workflow

1. Procurement Officer creates an RFQ.
2. Vendors receive invitations and submit quotations.
3. Procurement team compares quotations.
4. Approval workflow is initiated.
5. Approved quotations generate Purchase Orders.
6. Invoice is generated from the Purchase Order.
7. Invoice can be printed or emailed directly.
8. Procurement activities are tracked through logs and analytics.
